

Heber Light & Power Lake Creek Plant

Heber Light & Power Offers Powerful Benefits

Electricity prices are lower today than they've ever been. Consumers paid 25 cents per kilowatt hour at the turn of the century--or the equivalent of \$40 in today's dollars! By contrast, rates average about 7 cents per kilowatt hour today.

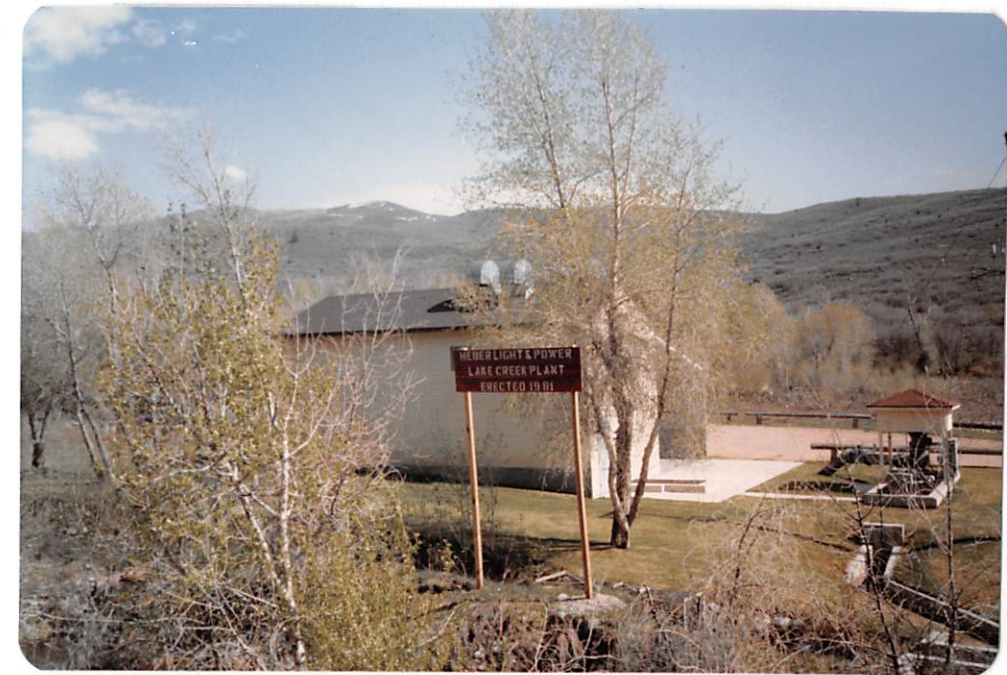

Heber Light & Power continues to search for ways to hold down electric rates. Because we're consumer-owned, we can buy power from the federal government at attractive prices. In the last six months, we paid 2.1 cents per kilowatt hour for federal hydropower, compared to 4.2 cents for other energy resources.

The total cost of all energy resources accounts for about 48% of your electric bill. The rest covers the cost of operating, maintaining, managing and distributing power to our customers.

Next time you flip a light switch or turn on the TV, think about the powerful benefits electricity brings you--at a cost that virtually everyone can afford. That's a mighty good deal.
